

To Whom It May Concern,

I am writing this letter with the intent of recommending the services provided by PE Systems. As a multi location grocery store, we are very conscientious of our line item expenses, and found that the opportunity of partnering with PE Systems was in our best interest to pursue. We valued the fact that there was absolutely no risk or monetary obligation that would be required of us if we chose not to move forward once they had presented their analysis. For us, the decision to allow them to examine our environment was a logical one, as well as made fiscal sense to our organization.

We were pleased to discover that their audit let us know that we were in the four percent of their client's in which they found that our credit card processing fees were in line with what is competitive and there were not any additional issues that were causing us overpayments. We work very hard to ensure that our fees are at a minimum, but now because of the cost free audit and education provided to us by PE Systems, we can be confident that all of the practices that we have put into place are truly in our organizations best interest. We also appreciate knowing that even though the service has cost us nothing, they are still our credit card consultants and are available to us in order to ensure that our fees stay at a minimum.

I highly recommend that you allow PE Systems to perform an analysis of your credit card processing environment and find out for yourself where your organization falls in the world of processing fees.

Sincerely,

Corporate Controller  
Harmon City Inc.
